

Project Timeline

The timeline for the delivery of the Environment Effects Statement for the project has been deferred by six months. The Department of Environment, Land, Water and Planning (DELWP) as well as the Technical reference Committee (TRG) has been notified of the deferment. Hanson will be utilising this time to update resource information, develop additional details on operating plant options and conceptual staging for quarry development.

Following confirmation of these project elements the final phase of a number of technical studies will commence. To date, technical work has predominantly involved the collection of background information to understand the site and existing environment.

The Bunyip North Project Schedule has been updated and attached for your information based on the revised timelines. Hanson will continue to meet with community members and engage with various organisations. However the next community information session will now be conducted in early 2019.

Project Updates will continue to be produced and distributed and registered on the Community Contact Database and uploaded to the Hanson website at <http://www.hanson.com.au/About/Regulatory-Information/Projects/Bunyip-North-Quarry-EES>.

Receptor Map

A Receptor Map, identifying the location of all residential dwellings surrounding the proposed quarry site, has been updated to include input from the community and address errors identified in the draft version.

A copy of the updated map is included in this update for your reference. Should you notice any additional anomalies on this map, please send us your comments or input via email to community.bunyipnorth@hanson.com.au by **Friday 13 July 2018**.

If you are having trouble viewing the map below, it can be viewed on the Hanson website by logging on to the link at: <http://www.hanson.com.au/About/Regulatory-Information/Projects/Bunyip-North-Quarry-EES>.

Phone: 03 9274 3700 - Office hours 8:30am to 5:00pm

Consultation

Hanson would like to thank those who have made the time to get in touch throughout the EES process to date and encourages anyone who would like more information to get in touch. Valuable feedback and information from the community can be incorporated into the EES process via numerous means.

As per the Community Consultation Plan, Hanson has continued to engage directly with local residents as well as meet with local community groups and organisations.

Other news

While Hanson staff and specialist consultants have been undertaking study investigations, management of the site is continuing. Hanson has appointed an additional contractor to ensure weed management of the land is maintained and conducted regularly in accordance with Shire of Cardinia environmental regulations.

Hanson intends to commence planting of trees and shrubs in the buffer zone along Sanders Road. Planting this area now will ensure that, should the quarry be approved, vegetation around the site is well established by the time the proposed quarry is under construction and operational.
