## Rocla Quarry Products Calga Quarry

Environmental Monitoring

## Dust Deposition Gauges, Surface and Ground <br> Waters and Meteorological Station

## January 2014

Colin Davies BSc MEIA CENVP
Environmental Scientist
Date: 03 March 2014

## Executive Summary

Carbon Based Environmental is contracted by Rocla Quarry Products to conduct environmental monitoring at the Calga Sand Quarry.

The monitoring includes;

- Dust Deposition Gauges;
- Surface Waters;
- Groundwaters; and
- Meteorological Station.

This report was prepared by Carbon Based Environmental and includes the following;

- Dust Deposition results for January 2014;
- Surface Water quality results for January 2014;
- Groundwater depth and quality results for January 2014; and
- Meteorological report for January 2014.

The January 2014 dust deposition results for insoluble solids were generally low and free of major contamination this month. All sites, on a rolling annual average basis, are currently below the Air Quality Management Plan exceedance level of $3.7 \mathrm{~g} / \mathrm{m}^{2}$. month. Results were found to be representative of dust levels as determined by the Australian Standard.

Surface water samples were collected on 3 February 2014 at sites A and F. Site C was inaccessible and unable to be sampled this month. Site B and Site D were dry at the time of sampling this month. The samples were collected and analysed for a monthly sampling event. Results show pH within the slightly acidic to neutral range, low Electrical Conductivity, low Total Dissolved Solids and low Total Suspended Solids. Oil and Grease was not detected at any site.

Groundwaters were sampled for normal monthly monitoring on 3 February 2014. Groundwater depth generally increased across the sampled groundwater bores when compared to last month. Groundwater pH and EC were generally stable this month with the exception of CQ10 which showed a decrease in pH .

The meteorological station data recovery for the month was approximately $100 \%$. Recorded rainfall on site for January was 29.6 mm , which was lower than the Peats Ridge long-term average for January. A comparison is shown below:

Rocla Calga Quarry

## Sampling Program

Rocla Calga Quarry conducts environmental monitoring in accordance to Development Consent, OEH (EPA) licence and Environmental Management Plans. Carbon Based Environmental are contracted to undertake dust deposition gauge, surface and groundwater and meteorological monitoring for the project. Carbon Based Environmental commenced monitoring from the April 2006 monitoring period.

Dust deposition gauges are operated to the Australian Standard AS3580.10.1 "Methods for Sampling and Analysis of Ambient Air Method 10.1 Determination of Particulates-Deposited Matter-Gravimetric Method". Sampling is undertaken every $30+/-2$ days and each gauge is analysed for insoluble solids and ash residue. The results are reported as $\mathrm{g} / \mathrm{m}^{2}$. month.

Surface waters are sampled in accordance with Australian Standards AS5667.1 "Guidance on the Design of Sample Programs, Sampling Techniques and the Preservation and Handling of Samples", AS5667.6 "Water Quality SamplingGuidance on sampling of rivers and streams" and AS5667.4 "Water Quality Sampling-Guidance on sampling from lakes, natural and man-made". Surface water monitoring sites include local streams and dams. Basic analysis including pH , Electrical Conductivity, Total Suspended Solids, Total Dissolved Solids and Total Oil and Grease is conducted monthly at Sites A and F (dams) and when Sites B, C and D are flowing. Additional samples are collected when daily rainfall exceeds 50 mm .

Groundwaters are sampled in accordance with Australian Standards AS5667.1 "Guidance on the Design of Sample Programs, Sampling Techniques and the Preservation and Handling of Samples" and AS5667.11 "Water Quality SamplingGuidance on sampling of ground waters". Groundwater monitoring sites are sampled at least bi-monthly for water quality and at least quarterly for water level. Groundwater monitoring loggers continuously record water levels in a selection of bores.

Meteorological monitoring is conducted at the quarry and displayed on the site computer with a real time display. Wind parameters are measured according to Australian Standard AS 2923 "Ambient Air— Guide for Measurement of Horizontal Wind for Air Quality Applications".

The weather stations have the following sensor configuration;
Air temperature

- Humidity
- Rainfall
- Atmospheric pressure
- Evaporation
- Solar radiation
- Wind speed
- Wind direction

Carbon Based Environmental continued to operate the monitoring equipment and utilise site collections at their existing locations.

The locations of monitoring points are provided in Figure 1.

### 2.0 Monthly Results

### 2.1 Dust Deposition Gauges

Table 1 displays the results for January 2014 and the project 12 month rolling average. Results are in $\mathrm{g} / \mathrm{m}^{2}$. month.

Table 1: Dust Deposition results: 3 January 2014 - 3 February 2014 (31 days)

| Site | Monthly <br> Insoluble <br> Solids <br> $\mathbf{g} / \mathbf{m}^{2} \cdot \mathbf{m o n t h}$ | Monthly <br> Ash <br> Residue <br> $\mathbf{g} / \mathbf{m}^{2} \cdot$ month | Monthly <br> Combustible <br> Matter <br> $\mathbf{g} / \mathbf{m}^{2} \cdot \mathbf{m o n t h}$ | Monthly <br> Ash Residue/ <br> Insoluble <br> Solids $\%$ | Rolling Annual <br> Average <br> Insoluble Solids <br> $\mathbf{g} / \mathbf{m}^{2}$. month |
| :---: | :---: | :---: | :---: | :---: | :---: |
| CD1 | 1.6 | 0.9 | 0.7 | 56 | 1.4 |
| CD2c | 0.6 | 0.3 | 0.3 | 50 | 1.1 |
| CD3 | 0.8 | 0.5 | 0.3 | 63 | 2.1 |
| CD4 | 0.7 | 0.3 | 0.4 | 43 | 0.6 |
| CD5 | 0.3 | 0.1 | 0.2 | 33 | 0.4 |
| CD6 | 0.7 | 0.3 | 0.4 | 43 | 0.6 |

Insoluble Solids marked with an * indicate an excessively contaminated gauge. Contamination can include bird droppings, vegetation (such as plant matter, algae, pollen and seeds) and insects. Results in bold indicate insoluble solids levels above $3.7 \mathrm{~g} / \mathrm{m}^{2}$.month; the Development Consent's annual average amenity criteria at residential locations. The current rolling annual average is calculated from February 2013 to January 2014.

NA $=$ Not Available.
CD1 was installed on the 1 May 2006. CD2a was discontinued at the start of August 2006 due to quarry operations "mining out" the site of the gauge. The replacement gauge, Site CD2b, was located in a position adjacent to the boundary between B. Kashouli and F. \& J. Gazzana in conformance with the Air Quality Management Plan. CD4 was installed on 3 October 2006, to gauge air quality impacts to the south of the site operations, as were CD5 and CD6 which were installed on the 14 December 2006. CD2b was discontinued at the end of January 2010 due to contamination of the gauge by non-quarry related vehicle movements on a track adjacent to the gauge. The replacement gauge, CD2c, was located on a rehabilitated section of land between the extraction area and adjacent resident.

Dust deposition charts for all dust gauge sites appear in Figure 2 below. The laboratory analysis is provided in Appendix 1.

Figure 2: Dust Deposition Charts

### 2.2 Surface Water Monitoring

Monthly surface water monitoring was conducted on the 3 February 2014 and results are listed in Table 2. The laboratory analysis sheets are provided in Appendix 1.

Table 2: Monthly surface water monitoring - January grab sample results

| Site | Observed Flow Rate | Water Colour | Turbidity | pH | $\underset{(\mu \mathrm{S} / \mathrm{cm})}{\mathrm{EC}}$ | $\begin{aligned} & \text { TDS } \\ & \text { (mg/L) } \end{aligned}$ | $\begin{aligned} & \text { TSS } \\ & \text { (mg/L) } \end{aligned}$ | Oil and Grease ( $\mathrm{mg} / \mathrm{L}$ ) |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | Dam | Clear | Slight | 6.57 | 86 | 61 | 9 | <5 |
| B | Dry |  |  |  |  |  |  |  |
| C | No access |  |  |  |  |  |  |  |
| D | Dry |  |  |  |  |  |  |  |
| F | Dam | Clear | Clear | 6.32 | 92 | 73 | <5 | <5 |

Samples were collected at sites A and F. Site C was inaccessible and unable to be sampled this month. Site B and Site D were dry at the time of sampling this month. The samples were collected and analysed for a monthly sampling event. Results show pH within the slightly acidic to neutral range, low Electrical Conductivity, low Total Dissolved Solids and low Total Suspended Solids. Oil and Grease was not detected at any site.

### 2.3 Groundwater Monitoring

Groundwaters were sampled on 3 February 2014. Water quality tests for pH and electrical conductivity were conducted by Carbon Based Environmental Pty Limited. For water quality purposes, water was purged from the bore until constant pH (+/-0.1 pH units) and Electrical Conductivity ( $+/-5 \%$ ) was obtained between samples. Data is displayed in Table 3 and Figures 3 to 6.

Groundwater depth increased at all sampled sites compared to last month, indicating water generally moving away from the surface.
pH at all sites is in the acidic to neutral range. pH levels remained steady across all sampled sites with the exception of CQ10 which showed a decreased in pH . EC levels were generally similar when compared to the results obtained in December 2013.

Table 3: Groundwater Quality Data

| MW16 | Rocla Bore | DIP Only | NI | NM | NM | NM |

Notes:
TOC = Water level measured from top of bore case to water.
NM $=$ Not Monitored - unable to sample water due to access restrictions.
NR = Not Required by resident.

* $=$ Logger Installed.
$\mathrm{NI}=$ These bores were not installed in April 2006 but are now operational. April 2006 was the first set of measurements taken by Carbon Based Environmental Pty
Limited.
Shading is used to indicate the following trends in water depth (compared to the last reading):

|  | Increase to ground water depth (water moved away from surface) |
| :--- | :--- |
|  | Decrease to ground water depth (water moved towards surface) |
|  | Stable water depth (+/-0.01m) |

Available groundwater loggers were downloaded and will be forwarded to the Rocla Calga Quarry groundwater consultant.

### 2.4 Meteorological Monitoring

The Rocla Calga Quarry weather station data recovery in January 2014 was approximately $100 \%$. The weather station data follows and includes;

- Monthly data numerical summary;
- Weather charts of air temperature, humidity, heat index and wind chill, atmospheric pressure, solar radiation, evapotranspiration, rain, wind speed and data reception; and
- Wind rose (frequency distribution diagram of wind speed and direction).

Monthly weather statistics from the nearby Bureau of Meteorology (BOM) at Peats Ridge station are no longer available. However, the long term rainfall mean is available via a link on the Gosford BOM Daily Weather Observation page.

Data for January 2014 shows that rainfall recorded at the Rocla Calga Quarry was higher than the Gosford BOM and lower than the Peats Ridge long term mean rainfall for January 2014. The rainfall comparison is provided below:

| Rocla Calga Quarry | 29.6 mm |
| :--- | :---: |
| BOM Peats Ridge* | NA |
| BOM Gosford* | 22.0 mm |
| BOM Peats Ridge Long term mean for January* | 117.0 mm |
|  |  |
|  |  |
| NA = Not Available |  |
| *Data sourced from Bureau of Meteorology (BOM) website (www.bom.gov.au). |  |

Results are displayed in the following table and figures.

Data Reception

### 2.4.3 Monthly Windrose Plot

Frequency plot of the average wind speed and average direction over each 15 minute sampling period. Wind is considered to be calm when less than a 15 minute average of $1 \mathrm{~m} / \mathrm{s}$.

00:15, 01 January 2014-23:45, 31 January 2014

The predominant winds were from the ENE, with strongest winds from the WSW. The maximum wind speed was $20.1 \mathrm{~m} / \mathrm{s}$ from the SSW.

## General Comments

 developed procedures are employed in the absence of documented standards or by client request.

Where moisture determination has been performed, results are reported on a dry weight basis.
Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.
Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.
When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.
Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.
Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society LOR = Limit of reporting
${ }^{\wedge}=$ This result is computed from individual analyte detections at or above the level of reporting

- Analysis as per AS3580.10.1-2003. Samples passed through a 1 mm sieve prior to analysis. NATA accreditation does not apply for results reported in g/m².mth as sampling data was provided by the client.
