| PO1                  | The choice of the site at which the activity is to be carried out minimises serious environmental harm on areas of high conservation value and special significance, and sensitive land uses at adjacent places. | AO1.1 Areas of high conservation value and special significance likely to be affected by the activity are identified and evaluated, and any adverse effects on these areas are minimised, including edge effects. AND | N/A | The EP Act and associated regulation does not define ‘Areas of high conservation value and special significance’. Officers from EHP have advised the following: "As you have discovered, there is no specific definition in relation to what an area of high conservation value or special significance is. In practice though professional judgement would need to be used to determine what these areas are defined as. Typically however they include but not be limited to conservation areas such as national parks, marine parks, world heritage areas or areas subject to international conventions. Special significance areas could again be but not limited to places of cultural heritage and the like administered through the Queensland Heritage Act 1992.” The Site is not a conservation area such as a national park, marine park, world heritage area or an area subject to international convention or an area of cultural heritage significance. Furthermore, correspondence from Vegetation Management Officers from the Department of Natural Resources and Mines (DNRM) dated 13 August 2012 confirmed that the proposed clearing for the application is exempt under Schedule 24, Part 2 of Sustainable Planning Regulation 2009 (SPR) (refer Attachment 10 – DNRM Vegetation Clearing Exemption Correspondence of the Planning Assessment Report). For these reasons, it is our opinion the Site and land surrounding

(b) contains and treats hazardous contaminants, rather than releasing them. | | | 

**Standard criteria**

PO4 The design of the activity demonstrates consideration of the **standard criteria**.
Editor’s note: It is recommended that the development application should address how it has considered the standard criteria.

| No acceptable outcome is prescribed. | | | The standard criteria have been addressed as follows:
- Appropriate studies have been undertaken as part of the quarry design to ensure that the appropriate measures will be taken to manage the environment and community in accordance with the principles of the precautionary principle.
- Although the proposed development involves extraction of a non renewable resource the development of the Site provides economic benefits to the wider community which provides opportunities for intergenerational equity on a wider scale.
- Appropriate studies have been undertaken to ensure that the appropriate measures will be taken to manage the environment and biodiversity.
- Commonwealth and Government Plans have been assessed in the Targeted Flora and Fauna Assessment by BAAM (refer to Attachment 3 – Targeted Flora and Fauna Assessment of the Planning Assessment Report).
- The Site is not within a wild river declaration area.
- Environmental Impact Studies have not been undertaken on the Site.
- The character, resilience and values of the receiving environment have been assessed in the Targeted Flora and Fauna Assessment by BAAM (refer to Attachment 3 – Targeted Flora and Fauna Assessment of the Planning Assessment Report).
- A Site Based Management Plan (SBMP) has been prepared to assist in the management and protection of surrounding environmental values and describes how the operator proposes to manage potential environmental impacts which...

| PO5 The activity avoids adverse impacts on matters of national environmental significance and matters of state environmental significance or, where this is not reasonably possible, impacts are minimised and residual impacts are offset. | AO5.1 Matters of national environmental significance and matters of state environmental significance likely to be affected by the activity are identified and evaluated, and any adverse effects on the matters of national environmental significance of matters of state environmental significance are avoided or, where this cannot be reasonably achieved, impacts are minimised and any residual impacts are offset. | P/S | Correspondence from Vegetation Management Officers from the Department of Natural Resources and Mines (DNRM) dated 13 August 2012 confirmed that the proposed clearing for the application is exempt under Schedule 24, Part 2 of Sustainable Planning Regulation 2009 (SPR) (refer Attachment 12 – DNRM Vegetation Clearing Exemption Correspondence of the Planning Assessment Report). 
Matters of national environmental significance and matters of state environmental significance have been evaluated in the Targeted Flora and Flora Assessment by BAAM (refer to Attachment 3 – Targeted Flora and Fauna Assessment of the Planning Assessment Report). Appropriate measures have been adopted to minimise impacts such as the establishment of buffers surrounding the extractive industry operation which will offset impacts on these values. |

**Performance outcomes**

- **Applicable ERA.**
- **Cattle:** National guidelines for beef cattle feedlots in Australia, 3rd Edition, Meat & Livestock Australia, 2012
- **Cattle and sheep:** National beef cattle feedlot environmental code of practice, 2nd Edition, Meat & Livestock Australia, 1997
- **Pig keeping:** National environmental guidelines for piggeries, 2nd Edition (Revised), Tucker, RW, McGahan, EJ, Galloway, JL and O’Keefe for Australian Pork Limited, 2010
- **Poultry farming:** Queensland guidelines for meat chicken farms, Department of Agriculture, Fisheries and Forestry, 2012

**PO3** The structures containing and controlling run-off from the activity and waste re-use areas minimise adverse effects on surface waters external to the activity.

Editor’s note: To meet the requirements of this performance outcome, it is recommended that the applicant develop a management system for the activity, detailing:

1. environmental hazards
2. risk assessment processes
3. an auditable, risk-based management system for the operation of the activity
4. procedures for annual review
5. proposed maintenance operations
6. stock numbers
7. monitoring of pens, sheds, ponds, drainage and any obvious dust, noise and odour impacts.

Note: Development should have regard to the following industry guideline for surface water for the applicable ERA.

- **Cattle:** National guidelines for beef cattle feedlots in Australia, 3rd Edition, Meat & Livestock Australia, 2012
- **Cattle and sheep:** National beef cattle feedlot environmental code of practice, 2nd Edition, Meat & Livestock Australia, 2012

17.1 Public passenger transport state code

17.1.1 Purpose
The purpose of the code is to ensure that development:
(1) supports the integration of land use with public passenger services and public passenger transport infrastructure
(2) does not have a significant adverse impact on existing or future public passenger transport and public passenger transport infrastructure
(3) promotes and maximises the use of public passenger transport as an attractive, efficient and accessible travel alternative to private transport in a way that reduces the overall economic, environmental and social costs of transport
(4) increases opportunities for people to access public passenger transport, including access by active transport
(5) provides, as far as practicable, public passenger transport infrastructure to support public passenger services.

Note: This code applies to all purposes listed under column 1 of Schedule 9 to the Sustainable Planning Regulation 2009 except the following items: 9, 18, 19, 20, 21, 22, 23, 24, 29 and 30.

Extractive Industry is listed as Item 18 under column 1 of Schedule 9 to the Sustainable Planning Regulation 2009 therefore this Code is not applicable.
