To: Hanson Construction Materials Pty Ltd
c/- Groundwork Plus
PO Box 2779
MILTON BC QLD 4064

Your reference: EPPR01766213
Our reference: 241662

Application details

I refer to the application that was received by the administering authority on 01-NOV-2013.

Decision

Your application has been approved and your environmental authority (reference EPPR01766213) is attached.

Should you have any further enquiries, please contact the Industry and Development team on telephone (07) 4699 4370.

Yours sincerely

Tariq Khan
Department of Environment and Heritage Protection
Delegate of the administering authority
Environmental Protection Act 1994

Permit - environmental authority (reference EPRR01766213)
Permit

Environmental Protection Act 1994

Environmental authority

This environmental authority is issued by the administering authority under Chapter 5 of the Environmental Protection Act 1994.

Permit number: EPPR01766213

Environmental authority takes effect upon granting of the development approval

The first annual fee is payable within 20 business days of the effective date.

The anniversary date of this environmental authority is the same day each year as the effective date. An annual return and the payment of the annual fee will be due each year on this day.

Additional information for applicants

Environmentally relevant activities

The description of any environmentally relevant activity (ERA) for which an environmental authority is issued is a restatement of the ERA as defined by legislation at the time the approval is issued. Where there is any inconsistency between that description of an ERA and the conditions stated by an environmental authority as to
the scale, intensity or manner of carrying out an ERA, then the conditions prevail to the extent of the inconsistency.

An environmental authority authorises the carrying out of an ERA and does not authorise any environmental harm unless a condition stated by the authority specifically authorises environmental harm.

A person carrying out an ERA must also be a registered suitable operator under the Environmental Protection Act 1994 (EP Act).

Contaminated land

It is a requirement of the EP Act that if an owner or occupier of land becomes aware a notifiable activity (as defined in Schedule 3 and Schedule 4) is being carried out on the land, or that the land has been, or is being, contaminated by a hazardous contaminant, the owner or occupier must, within 22 business days after becoming so aware, give written notice to the chief executive.

Date
Obligations under the *Environmental Protection Act 1994*

In addition to the requirements found in the conditions of this environmental authority, the holder must also meet their obligations under the EP Act, and the regulations made under the EP Act. For example, the holder must comply with the following provisions of the Act:

- general environmental duty (section 319)
- duty to notify environmental harm (section 320-320G)
- offence of causing serious or material environmental harm (sections 437-439)
- offence of causing environmental nuisance (section 440)
- offence of depositing prescribed water contaminants in waters and related matters (section 440ZG)
- offence to place contaminant where environmental harm or nuisance may be caused (section 443)

Conditions of environmental authority

**Location:** Harts-Luscombe Gold Coast

Stanmore- Luscombe Gold Coast

Lot 1 Plan SP244693

**Relevant activity/ies:**

16-(2c) Extraction, other than by dredging, in a year, more than 1,000,000t

16-(3c) Screening, in a year, more than 1,000,000t

The environmentally relevant activity(ies) conducted at the location as described above must be conducted in accordance with the following site specific conditions of approval.

<table>
<thead>
<tr>
<th>Agency interest: General</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Condition number</strong></td>
</tr>
<tr>
<td><strong>Condition</strong></td>
</tr>
<tr>
<td>G1</td>
</tr>
<tr>
<td>Activities conducted under this environmental authority must not be conducted contrary to any of the following limitations:</td>
</tr>
<tr>
<td>1. The activities (extraction and screening) are to occur only within the nominated area identified in plan 1001.278 dated 19 November 2014 attached herein (Attachment 1).</td>
</tr>
</tbody>
</table>
G2 All reasonable and practicable **measures** must be taken to minimise the likelihood of environmental harm being caused.

G3 Any breach of a condition of this environmental authority, must be reported to the **administering authority** as soon as practicable, or at most, within 24 hours of **you** becoming aware of the breach. Records must be kept including full details of the breach and any subsequent actions undertaken.

G4 Other than as permitted by this environmental authority, the **release of a contaminant into the environment** must not occur.

G5 All information and records that are required by the conditions of this environmental authority must be kept for a minimum of five (5) years. Environmental monitoring results must be kept until surrender of this environmental authority. All information and records required by the conditions of this environmental authority must be provided to the **administering authority** upon request.

G6 An **appropriately qualified person(s)** must monitor, record and interpret all parameters that are required to be monitored by this environmental authority and in the manner specified by this environmental authority.

G7 All analyses required under this environmental authority must be carried out by a laboratory that has NATA certification, or an equivalent certification, for such analyses. The only exception to this condition is for **in situ** monitoring of pH and Dissolved Oxygen.

G8 When required by the **administering authority**, monitoring must be undertaken in the manner prescribed by the **administering authority**, to investigate a complaint that is not considered by the **administering authority** to be frivolous or vexatious, of environmental nuisance arising from the **activity**. The monitoring results must be provided to the **administering authority** upon request.

G9 The **activity** must be undertaken in accordance with written procedures that:

1. identify potential risks to the environment from the **activity** during routine operations, closure and an emergency
2. establish and maintain control **measures** that minimise the potential for environmental harm
3. ensure plant, equipment and **measures** are maintained in a proper and effective condition
4. ensure plant, equipment and **measures** are operated in a proper and effective manner
5. ensure that staff are trained and aware of their obligations under the *Environmental Protection Act 1994*
6. ensure that reviews of environmental performance are undertaken at least annually.

G10 Except for the nominated areas identified within condition G1, a minimum buffer distance of 50m must be maintained between extraction areas and the high banks of any watercourse, lake or wetland.

**Agency interest: Air**

<td>Dissolved Oxygen (mg/L)</td>
<td>6</td>
<td>Minimum</td>
<td>Prior to discharge and daily during discharge.</td>
</tr>
</tbody>
</table>

Associated monitoring requirements

Monitoring must be in accordance with the methods prescribed in the current edition of the Department of Environment and Heritage Protection Water Quality Sampling Manual.

1. Samples must be taken using representative samples.
2. All determinations must employ analytical practical quantification limits sufficiently low enough to enable comparisons to be made against water quality objectives/limits relevant to the particular water quality characteristic.
3. Monitoring must be undertaken during a release as per the frequency stated.
4. All monitoring devices must be correctly calibrated and maintained.

WT2 In addition to WT1, the release to waters must not:

1. have any other properties at a concentration that is capable of causing environmental harm
2. produce any slick or other visible evidence of oil or grease, nor contain visible floating oil, grease, scum, litter or other visually objectionable matter.

WT3 The stormwater runoff from disturbed areas, generated by (up to and including) a **24 hour storm event with an average recurrence interval of 1 in 5 years** must be retained on site or managed to remove contaminants before release.
Agency interest: Noise

<table>
<thead>
<tr>
<th>Condition number</th>

<td>L_{Aeq, adj, T} 30dB(A)</td>
</tr>
</tbody>
</table>

**Associated monitoring requirements**

1. All monitoring devices must be correctly calibrated and maintained.
2. Any monitoring must be in accordance with the most recent version of the administering authority’s Noise Measurement Manual.
3. Any monitoring of noise emissions from the activity must be undertaken when the activity is in operation.
When required by the administering authority, noise monitoring must be undertaken in accordance with the associated monitoring requirements of Table 1—Noise Limits, and the results notified within 14 days to the administering authority. Monitoring must include:

1. \( L_{\text{Aeq,adj,T}} \)
2. **Background** noise (Background) as \( L_{\text{A90,adj,T}} \)
3. \( \text{Max} L_{\text{PA,T}} \)
4. the level and frequency of occurrence of any impulsive or tonal noise
5. atmospheric conditions including wind speed and direction
6. effects due to extraneous factors such as traffic noise
7. location, date and time of recording.

**Blasting** activities must not exceed the limits for peak particle velocity and air blast overpressure in Table 3—Blasting noise limits when measured at any sensitive place or commercial place in accordance with the associated monitoring requirements.

**Table 3—Blasting noise limits**

<table>
<thead>
<tr>
<th>Blasting criteria</th>
<th>Blasting limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Airblast overpressure</td>
<td>115 dB (Linear) Peak for 9 out of 10 consecutive blasts initiated and not greater than 120 dB (Linear) Peak at any time.</td>
</tr>
<tr>
<td>Ground vibration peak particle velocity</td>
<td>5mm/second peak particle velocity for 9 out of 10 consecutive blasts and not greater than 10 mm/second peak particle velocity at any time.</td>
</tr>
</tbody>
</table>

Associated monitoring requirements

1. Monitoring must be in accordance with the most recent editions of the administering authority's 'Noise and Vibration from Blasting' guideline and Noise Measurement Manual and any relevant Australian standard.
2. All monitoring devices must be correctly calibrated and maintained.

**Blasting** must be carried out in accordance with the current edition of the administering authority's 'Noise and vibration from blasting guideline' and with Australian Standard 2167.

Unless prior approval is obtained from the administering authority:

1. **blasting** is only permitted during the hours of 9am to 5pm Monday to Saturday.
2. **blasting** is not permitted at any time on Sundays or public holidays.

When required by the administering authority, a blast monitoring program must be developed and implemented to monitor compliance with Table 3—Blasting noise limits at any sensitive place or commercial place.
### Agency interest: Land

<table>
<thead>
<tr>

<td>Impacts on State Significant Biodiversity Values within Lot 2 RP813599 and Lot 80 CP893560 are not permitted to occur until offsets have been legally secured.</td>
</tr>
</tbody>
</table>
Definitions

Key terms and/or phrases used in this document are defined in this section and **bolded** throughout this document. Applicants should note that where a term is not defined, the definition in the *Environmental Protection Act 1994*, its regulations or environmental protection policies must be used. If a word remains undefined it has its ordinary meaning.

**Activity** means the environmentally relevant activities, whether resource activities or prescribed activities, to which the environmental authority relates.

**Administering authority** means the Department of Environment and Heritage Protection or its successor or predecessors.

**Airblast overpressure** is the energy transmitted from the blast site within the atmosphere in the form of pressure waves. As these waves pass a given position, the pressure of the air rises very rapidly then falls more slowly then returns to the ambient value after a number of oscillations. The pressure wave consists of both audible (noise) and inaudible (concussion) energy. The maximum excess pressure in this wave is known as the peak air overpressure, generally measured in decibels using the linear frequency-weighting.

**Appropriately qualified person(s)** means a person or persons who has professional qualifications, training, skills or experience relevant to the nominated subject matter and can give authoritative assessment, advice and analysis to performance relative to the subject matter using the relevant protocols, standards, methods or literature.

**Background** means noise, measured in the absence of the noise under investigation, as L A90,T being the A-weighted sound pressure level exceeded for 90 per cent of the time period of not less than 15 minutes, using Fast response.

**Blasting** is the use of explosives to fracture:
- rock, coal and other minerals for later recovery; or
- structural components or other items to facilitate removal from a site or for reuse.

**Commercial place** means a place used as a workplace, an office or for business or commercial purposes and includes a place within the curtilage of such a place reasonably used by persons at that place.

**Dredging** includes extraction of mud, sand, coral, ballast, shingle, gravel, clay, earth and other material from the bed of Queensland tidal and non-tidal waters. Dredging does not include the banks of a waterway.

**L_{Aeq, adj,T}** means the adjusted A weighted equivalent continuous sound pressure level measures on fast response, adjusted for tonality and impulsiveness, during the time period T, where T is measured for a period no less than 15 minutes when the activity is causing a steady state noise, and no shorter than one hour when the approved activity is causing an intermittent noise.

**Max_{P_{A}T}** means the maximum A-weighted sound pressure level measured over a time period T of not less than 15 minutes, using Fast response.

**Measures** has the broadest interpretation and includes plant, equipment, physical objects, bunding, containment systems, monitoring, procedures, actions, directions and competency.

**NATA** means National Association of Testing Authorities.

**Noxious** means harmful or injurious to health or physical well-being.

**Offensive** means causing offence or displeasure; is unreasonably disagreeable to the sense; disgusting, nauseous or repulsive.

**Prescribed contaminants** means contaminants listed within Schedule 9 of the Environmental Protection Regulation 2008.
Release of a contaminant into the environment means to:
- deposit, discharge, emit or disturb the contaminant
- cause or allow the contaminant to be deposited, discharged, emitted or disturbed
- fail to prevent the contaminant from being deposited, discharged emitted or disturbed
- allow the contaminant to escape
- fail to prevent the contaminant from escaping.

Sensitive place includes the following and includes a place within the curtilage of such a place reasonably used by persons at that place:
- a dwelling, residential allotment, mobile home or caravan park, residential marina or other residential premises; or
- a motel, hotel or hostel; or
- a kindergarten, school, university or other educational institution; or
- a medical centre or hospital; or
- a protected area under the Nature Conservation Act 1992, the Marine Parks Act 1992 or a World Heritage Area; or
- a public thoroughfare, park or gardens; or
- for noise, a place defined as a sensitive receptor for the purposes of the Environmental Protection (Noise) Policy 2008.

Substantial low frequency noise means a noise emission that has an unbalanced frequency spectrum shown in a one-third octave band measurement, with a predominant component within the frequency range 10 to 200Hz. It includes any noise emission likely to cause an overall sound pressure level at a sensitive place exceeding 55dB(Z).

24 hour storm event with an average recurrence interval of 1 in 5 years means the maximum rainfall depth from a 24 hour duration precipitation event with an average recurrence interval of once in 5 years. For example, an Intensity-Frequency-Duration table for a 24 hour duration event with an average recurrence interval of 1 in 5 years, identifies a rainfall intensity of 7.09mm/hour. The rainfall depth for this event is therefore 24 hour x 7.09mm/hour = 170.16mm.

Vibration is the oscillating or periodic motion of a particle, group of particles, or solid object about its equilibrium position.

Waters includes river, stream, lake, lagoon, pond, swamp, wetland, unconfined surface water, unconfined water, natural or artificial watercourse, bed and bank of any waters, dams, non-tidal or tidal waters (including the sea), stormwater channel, stormwater drain, roadside gutter, stormwater run-off, and groundwater and any part thereof.

You means the holder of the environmental authority.
