

Drilling Project Update

Project Update #11 provided notification of a drilling program that would commence on Monday 10 September 2018 and be completed by Friday 5 October 2018. Hanson has been advised by the drilling contractor that the time taken to complete a number of the scheduled holes has taken longer than anticipated. As a consequence, the drilling program has been extended to ensure all testing is conducted in accordance with EES requirements. It is expected that drilling will now be completed the week of 29 October 2018.

The drilling works will be continue to be carried out in compliance with the *Environment Protection Act* 1970, and its associated regulations, by a professional drilling firm that operates under a comprehensive HSE (health, safety and environment) management system, and the third party noise consultant will continue to monitor the drilling program and ensure compliance at all times.

Community Consultation Plan V3

Version 3 of the Community Consultation Plan has now been published and can be viewed at:
